Experience

Freelance | AI Engineer (Senior Full Stack Developer) | Mar 2026 – Present

Project Overview:

This role focuses on designing and building full stack, AI-assisted enterprise solutions — from scalable .Net microservices and REST APIs to modern React web and Electron desktop applications. The work emphasizes clean, maintainable code through Layered Architecture and SOLID principles, backed by Azure cloud services (Azure SQL and Azure Blob Storage) and AI-driven development practices that accelerate delivery.

Role: AI Engineer (Senior Full Stack Developer)

Key Responsibilities:

- **AI-Driven Development:**
  Applied AI tools such as Claude and GitHub Copilot across the development lifecycle — code generation, refactoring, unit test creation, code review, debugging, and technical documentation — to speed up delivery while maintaining code quality.
- **Backend & API Development:**
  Designed and developed REST APIs and microservices using .Net and C#, building secure, scalable, and independently deployable services.
- **Frontend Development:**
  Built responsive, modern web interfaces using React, Vite, and Tailwind CSS, focusing on performance, reusability, and a consistent user experience.
- **Desktop Application Development:**
  Developed cross-platform desktop applications using Electron with React, integrating with backend REST APIs and microservices.
- **Software Architecture:**
  Structured solutions using Layered Architecture (presentation, business, and data access layers) and applied SOLID principles to keep codebases modular, testable, and easy to extend.
- **Cloud Data & Storage:**
  Designed and managed databases on Azure SQL and handled file and document storage using Azure Blob Storage.
- **Unit Testing:**
  Created unit tests using the NUnit framework to validate business logic and ensure reliable, high-quality releases.
- **Version Control & Collaboration:**
  Managed source code across GitHub, GitLab, and Azure Git repositories, including branching strategies, pull requests, and merge reviews.
- **Code Review & Mentoring:**
  Conducted peer code reviews and guided team members on architecture, coding standards, and effective use of AI development tools.

Tools and Technologies:

- **AI Tools:** Claude, GitHub Copilot
- **Backend:** .Net, C#, REST API, Microservices
- **Frontend & Desktop:** React, Vite, Tailwind CSS, Electron
- **Architecture & Design:** Layered Architecture, SOLID Principles
- **Cloud & Database:** Azure SQL, Azure Blob Storage
- **Testing:** NUnit for unit testing
- **Version Control:** GitHub, GitLab, Azure Git

WeSupport Inc | Senior .Net Developer (Metrobank) | Feb 2024 – Feb 2026

Project Overview:

The Metrobank project involves developing and enhancing the bank's internal and external API services to facilitate various banking operations. The primary focus is on creating robust, scalable, and secure RESTful APIs using .Net Core technology to improve the bank's digital capabilities for both internal users and third-party integrations, with AI tools such as Claude and GitHub Copilot integrated into the daily development workflow.

Role: Senior .Net Developer

Key Responsibilities:

- **API Development:**
  Developed new REST APIs using .Net 6 Core with C#, leveraging Dapper and ADO.Net for efficient database operations. The APIs serve as critical endpoints for banking transactions, account management, and customer data retrieval.
- **AI-Assisted Development:**
  Used AI tools such as Claude and GitHub Copilot to accelerate coding, generate and refine unit tests, troubleshoot bugs, review code, and draft technical documentation, improving overall productivity and code quality.
- **Feature Enhancement:**
  Designed and implemented new features and improvements on the existing systems to address evolving business requirements and improve user experience.
- **Agile Practices:**
  Participated actively in Agile Scrum ceremonies such as sprint planning, daily stand-ups, sprint reviews, and retrospectives to ensure timely delivery and continuous improvement.
- **Collaboration:**
  Worked closely with the internal development team and external third-party vendors to integrate various banking services and ensure seamless interoperability.
- **Bug Fixing and Maintenance:**
  Identified, diagnosed, and resolved bugs within the system to maintain high system availability and reliability.
- **Unit Testing:**
  Created unit tests using NUnit framework to ensure code quality and functionality, facilitating test-driven development.
- **Version Control:**
  Managed source code and collaborated with the team via Git repositories, ensuring proper versioning and codebase stability.
- **Code Review:**
  Conducted peer reviews to maintain coding standards, improve code quality, and share knowledge within the development team.
- **Ticket Management:**
  Tracked development progress and issues using Jira, ensuring proper documentation and follow-up on tasks and bugs.

Tools and Technologies:

- **Development:** MS Visual Studio 2022, Visual Studio Code
- **AI Tools:** Claude, GitHub Copilot (AI-assisted coding, unit testing, debugging, and code review)
- **Database:** MS SQL Server (using Dapper and ADO.Net for data access)
- **Testing:** NUnit for unit testing
- **API Testing:** Postman for manual API testing and validation
- **Project Management:** Jira for Agile ticket tracking
- **Documentation and Data Handling:** MS Excel, CSV files, MS Word for requirements documentation and data exchange

Loanworks | Analyst Programmer L3 | Feb 2021 – Feb 2024

This project centers on developing and improving enterprise applications by creating new RESTful APIs, enhancing user interface environments, and maintaining existing services. The goal is to deliver seamless, efficient, and scalable solutions using modern .Net technologies and front-end frameworks, integrated with DevOps pipelines for continuous integration and continuous deployment (CI/CD).

Role: .Net Developer

Key Responsibilities:

- **API Development:**
  Designed and developed new REST APIs using .Net Core with Entity Framework, working with C# on both .Net 6 and .Net 8 frameworks. These APIs handle core business logic and data transactions to support various client applications.
- **User Interface Development:**
  Created and enhanced UI components using AngularJS, JavaScript, Bootstrap, and classic ASP to improve user experience, accessibility, and responsiveness across web applications.
- **System Enhancement:**
  Developed additional features and upgraded existing backend services using C#.Net to meet evolving business needs and improve system performance.
- **Agile Methodology:**
  Followed Scrum practices, actively participating in sprint planning, daily scrums, reviews, and retrospectives to ensure iterative and collaborative development.
- **Collaboration:**
  Coordinated with cross-functional teams and third-party vendors to align development objectives and integrate external services seamlessly.
- **Bug Fixing and Maintenance:**
  Troubleshot production issues, performed bug fixes, and optimized existing codebases to enhance stability and reliability.
- **Unit Testing:**
  Implemented unit tests to validate functionality and support maintainable codebase, ensuring high-quality software releases.
- **Azure DevOps Integration:**
  Configured Azure DevOps environments including connecting to servers and setting up automated pipelines for build, test, and deployment processes.
- **Version Control and CI/CD:**
  Managed source code in Azure Git repositories, coordinated continuous integration and continuous deployment (CI/CD) workflows, and utilized Team Foundation Server (TFS) for task tracking and version control.
- **Code Reviews:**
  Conducted peer code reviews to enforce coding standards, improve code quality, and foster shared learning among team members.

- **Project & Documentation Tools:**
  Used Jira for issue tracking and Confluence for maintaining project documentation to ensure clear communication and visibility of project progress.

Tools and Technologies:

- **Development Environments:** MS Visual Studio 2019/2022, Visual Studio Code
- **Database:** MS SQL Server
- **API Testing:** Postman
- **Scripting & Markup:** XML, XSLT, YAML
- **Frontend:** AngularJS, JavaScript, Bootstrap, ASP Classic
- **Documentation & Data Handling:** MS Excel, CSV, Word, RTF
- **DevOps & Source Control:** Azure DevOps for CI/CD pipelines, Azure Git, TFS
- **Project Management:** Jira, Confluence

IBM Business Services, Inc. | Application Developer (ABS-CBN) | Jul 2019 – Dec 2020

This project focuses on continuously enhancing and maintaining an existing software system by developing new features, fixing bugs, and ensuring system stability. The project follows Agile Scrum methodology to deliver incremental improvements aligned with business needs.

Role: .Net Developer

Key Responsibilities:

- **Feature Development:**
  Developed and enhanced features on the existing system using C#.Net to address evolving user requirements and improve overall functionality.
- **Bug Fixing:**
  Diagnosed, troubleshot, and resolved software defects to maintain system reliability and performance.
- **Collaboration:**
  Actively collaborated with team members to design, develop, and implement system features, ensuring alignment with project objectives.
- **Unit Testing:**
  Created and executed unit tests to verify the correctness of newly developed features and bug fixes, promoting code quality.
- **Agile Practices:**
  Participated in Agile Scrum ceremonies, including sprint planning, daily stand-ups, and retrospectives, to foster teamwork and ensure timely delivery.

Tools and Technologies:

- **Development Environments:** MS Visual Studio 2019, Visual Studio Code
- **Database:** MS SQL Server
- **API Testing:** Postman
- **Documentation and Data Management:** MS Excel, CSV, Word

Accenture PH Manila | Sr. Application Development Analyst | Jan 2019 – Jun 2019

Project Details: Team Lead – Software Development and Agile Project Management

Project Overview:

As a Team Lead, the focus is on steering the development team to deliver high-quality software solutions while managing workflows, facilitating collaboration, and ensuring adherence to Agile methodologies.

Role: Team Lead

Key Responsibilities:

- **Team Leadership & Task Management:**
  Assigned and managed tasks for the development team by coordinating and prioritizing Snow (ServiceNow) and Jira tickets to ensure efficient workflow and timely delivery.
- **Bug Fixing Oversight:**
  Led efforts in identifying, prioritizing, and resolving bugs, ensuring robust and reliable software delivery.
- **Agile Methodology:**
  Facilitated Agile Scrum practices including sprint planning, daily stand-ups, sprint reviews, and retrospectives to maintain team productivity and continuous improvement.
- **Cross-Team Collaboration:**
  Worked closely with other teams to coordinate dependencies, share knowledge, and resolve cross-functional challenges.
- **Incident and Ticket Management:**
  Managed and tracked issues using ServiceNow (Snow) and Jira ticketing systems, ensuring clear communication and resolution.
- **Reporting:**
  Prepared and presented management reports summarizing project status, team performance, and key metrics to stakeholders for informed decision-making.
- **Peer Review:**
  Encouraged and participated in peer code reviews to maintain code quality and knowledge sharing within the team.

Tools and Technologies:

- **Development:** MS Visual Studio 2019, Visual Studio Code
- **Database:** MS SQL Server
- **Documentation and Reporting:** MS Excel, CSV, Word
- **Ticketing & Service Management:** Jira, ServiceNow (Snow)

Cognitif Inc. | Software Developer | Feb 2018 – Jan 2019

Project Details: Application Maintenance and New E-commerce System Development

Project Overview:

This project encompasses maintaining and enhancing existing ASP.Net applications while developing a new e-commerce system using modern .Net Core technologies. It also includes mentoring junior team members to build their technical skills and supporting Agile development processes.

Role: .Net Developer / Mentor

Key Responsibilities:

- **Application Maintenance:**
  Maintained and enhanced existing applications developed in C# ASP.Net to ensure smooth operation and implement necessary improvements.
- **New E-commerce System Development:**
  Designed and developed a new e-commerce platform using C# .Net Core along with front-end technologies including Bootstrap, HTML, Ajax, and JavaScript to provide a responsive and user-friendly interface.
- **Mentoring and Knowledge Transfer:**
  Conducted teaching and shadowing sessions for junior employees, focusing on technical skills such as SQL database handling and C#.Net programming to improve team capabilities.
- **Team Collaboration:**
  Worked closely with the development team to integrate components, discuss solutions, and coordinate tasks.
- **Unit Testing:**
  Developed and executed unit tests to verify code functionality and promote software quality.
- **Agile Methodology:**
  Followed Scrum frameworks for project management including sprint planning, stand-ups, and reviews to ensure iterative progress and timely delivery.
- **Issue Tracking:**
  Managed development tasks and tracked bugs using Jira ticketing system to maintain transparency and workflow.
- **Code Review:**
  Participated in peer code reviews to ensure adherence to coding standards and share best practices.

Tools and Technologies:

- **Development Environment:** MS Visual Studio 2017
- **Database:** MS SQL Server
- **API/Services Testing:** Postman
- **Documentation and Data Handling:** MS Excel, CSV, Word
- **Project Management:** Jira
- **Front-end:** Bootstrap, HTML, Ajax, JavaScript

Philsoft Technologies Group Inc. | Software Developer | Nov 2014 – Jan 2018

Project Details: Application Maintenance, Optimization, and Client Engagement

Project Overview:

This project involves maintaining and enhancing legacy and modern applications across multiple technologies while optimizing software performance, supporting business processes, and engaging directly with clients. The role also includes mentoring junior staff and participating in Agile development cycles.

Role: Software Developer / Technical Mentor

Key Responsibilities:

- **Application Maintenance and Enhancement:**
  Maintained and improved existing applications built with VB6, VB.Net, C#.Net, HTML, Bootstrap, JavaScript, and Ajax to ensure stability, functionality, and a better user experience.

- **Performance Optimization:**
  Analyzed and optimized software for improved speed and scalability, enhancing the efficiency of critical business applications.
- **Bug Fixing:**
  Identified, troubleshot, and resolved defects across applications to sustain system reliability and reduce downtime.
- **Mentoring Junior Employees:**
  Provided training and guidance on system processes such as Accounting, Payroll, and Billing to junior developers for improved team knowledge and capability.
- **Client Engagement:**
  Attended client meetings onsite to understand requirements, gather feedback, and ensure alignment of development efforts with business needs.
- **Agile Practices:**
  Participated in Scrum ceremonies to promote iterative development and continuous delivery.
- **Unit Testing:**
  Created and executed unit tests to validate new features and bug fixes, ensuring software quality.

Tools and Technologies:

- **Development Platforms:** VB6, MS Visual Studio 2010
- **Programming Languages:** VB6, VB.Net, C#.Net, HTML, JavaScript, Ajax, Bootstrap
- **Database:** MS SQL Server
- **Reporting:** Crystal Reports
- **Version Control:** SVN (Subversion), Team Foundation Server (TFS)
- **API Testing:** Postman
- **Documentation and Data Handling:** MS Excel, CSV, Word

Education

2014	Quezon City Polytechnic University
Degree	Bachelor's in Information Technology Major in Computer Science
